

Title:

Optimize Knowledge Sharing with Zen and Systems Thinking

Abstract:

A systems approach supported by mindfulness and Zen thinking enhances the ability of individuals and their teams and organizations to optimize the way they share knowledge and through that, optimize performance. This session addresses the way knowledge sharing can be integrated into the overall system of project management and performance. Knowledge management in an activity like PM requires a systems approach that ties together formal and just-in-time (JIT) learning, methodology and tacit learning within work teams. It requires personal commitment to learning and sharing knowledge. Knowledge transfer should be integrated into each project and to the project management process to transform tacit knowledge and lessons learned into explicit knowledge to continuously refresh the knowledge base.
